RE: Letter of Interest — Licensing of Digital Assets from Wound-Down Estates

Dear Director General,

We write on behalf of BRAINS AI, a Nairobi-based artificial intelligence company developing modular intelligence products for engineering and enterprise applications. We are writing to formally express our interest in licensing digital assets — including codebases, operational databases, and internal documentation — held under the administration of wound-down companies currently managed by the Business Registration Service (BRS) through the Office of the Official Receiver.

BRAINS AI is actively seeking to acquire real-world operational datasets and software assets for the purpose of training and improving our proprietary AI models. These assets, which often hold significant latent value that is not captured through conventional asset disposal processes, represent an opportunity to generate meaningful returns for creditors while ensuring the intellectual work of wound-down companies contributes to Kenya's growing technology ecosystem.

The categories of digital assets we are seeking to license include, but are not limited to:

- Source code and software codebases (GitHub, GitLab, Bitbucket repositories)
- Product and engineering documentation (Notion, Confluence, internal wikis)
- Operational databases and system logs (MySQL, PostgreSQL, MongoDB instances)
- Internal communications and decision records (Slack, Microsoft Teams archives)
- Design, architecture, and R&D notes (Jira, Linear, Trello, internal documents)
- Transaction and operational data (CRM systems, ERP exports, analytics data)

We propose a right-to-use licensing structure — no ownership transfer is required. BRAINS AI will enter into a formal licensing agreement with the estate, with full indemnification clauses to address any data privacy obligations. All personally identifiable user information will be stripped and anonymised prior to any data entering our training pipeline, in full compliance with Kenya's Data Protection Act, 2019. Depending on the volume and nature of the assets available, we are prepared to offer consideration of up to USD 500,000 per estate.

We respectfully request a meeting with the relevant administrator or insolvency practitioner within your office at your earliest convenience. We are available for either an in-person meeting at your UpperHill offices or a virtual call, and can work around your schedule. A 30-minute introductory meeting is sufficient to establish whether there is a mutually beneficial arrangement to be pursued.

We look forward to your response and the opportunity to discuss this further. Please do not hesitate to contact us directly using the details below.

Yours faithfully,

Stanley

Founder & CEO, BRAINS AI
